

they chatted awhile like this at the waterplace
when perma said,
mmmh, although i feel we should give others a chance to experiment here in your
appartement, we can still from time to time contribute some photos text and videos
from our tropical place
with ascende saying... i noticed you said our hut meaning your permaplace and
your appartement meaning here, shows me something on my still patriarchic
behaviour in our enterprise

oh that is okay, i do not care exactly who thinks what would belong to him or her ,
perma answered ascendes reflection
but yes, that is a good place to research the psychic constellation of the participants
regarding who will be able to call this or that success in biological cell manipulation
evolvment
his or her property

frankly, ascende said, i think we shall open source all of it, everyone welcome to
use our stuff how it fits them

perma... we just hope that they will use it in a benwvolent avenue what would help
humanity to work less and enjoy playing more

ascende... i think the key element of our findings are we ourselves, like our skin we
are wearing right now... we could try to explain about the gentleness involved when
cell samples being collected

perma.... and highlight the fusioning approach without any other heat than the ones
from our bodies, there was no cutting and pasting involved

no dna extraction processes, just our love towards the living cells in the petri dishes
ascende... us wishing for them to grow together and become a higher class then
when single

perma... i do not know if it is higher but the capability of our skins now are broader
and deeper filled with knowledge

they sat silent after that for about half an hour
when they lay down together holding each other softly

about 5 hours later they woke up
enjoyed some of the aeroponic and hydroponically grown strawberries with a juice of
fresh spirulina microalgae water from the bioreactors
they wandered around in the appartement spoke with the plants lauded them how
well they have developped and gave thanks for their contributions them serving the
humans in this less then ideal conditions

perma felt well what was missing, the greater connecting wind what brought
informations from far away places

the air in paris was better these days in 2020 when most of the cars were electric
populsd and much of the producing workshops used hydrogen fuell cells
but there was a kind of dividing effect going on with the air flowing in and out of

millions of houses

loosing on the way its wild informations and instead being informed with the doings of humans

ascende looked at it same but different

he loved the wild but still thought that it is well for the people living in the city to eat

food grown

near to them

perma too was understanding how this planet can host as many billion human beings as it eventually would need for this race to finally understand that they us do not own this place

because the more humans get born the more important will it be to use the space allready concreted made into roads etc in the most efficient way

so they were thinking to themselves wandering around in the appartement

getting ready for today 10 o clock when they would set the cameras in their living places on.... like ... their bed, their bathroom....

so they both stayed naked at ten

ascende laid on the balcony enjoying the early sun and perma standing at an empty wall

where they extra put a camera up

she started to talk about how they have met in the net she getting presented with the chameleon cells

and her still wondering how ascende got his plant life cell samples

at this moment the people watching the appartement as part of their daily holydays

like sightings of plants and cell evolutions in the petri dishes they all were

equipped with cameras ... the people started to realize what happened with her

talking of chamaeleon cells and slowly dressing herself with her skin becoming

pinkish with each piece of clothes she put on

at first they were writing cheering texts in the chat when after perma reacted to them thanking

for the cheers and enthusiastic feedbacks

some of the more serious into cell research

were asking questions like... how the heavens did you apply the chamelon

intelligence to your skin...

perma explained then how they both bathed with some tiny bits of successfully lab

petri dish fusioned

interspecies cells

ascende too ? someone asked with another person did remark that is why he is

laying there naked on his back on the balcony ... to soak up the sun with his

photosynthetic enabled new skin

perma was reading the text out loud to ascende adding, that might be your moment now to announce...

no , do not spill it my dear companion ... ascende laughingly cried out, jumping up on the balcony to adress the audience

at this point the reader would eventually be delighted to hear the unveiling of the story how he got his plant live cells

but the author here has just not figured it out yet ... or...have i forgotten it, was i no writing something of a plant part being trampled off by animals... yes ... but it is not as gentle as the meditation experience what brought live chameleon skin cells to perma

so... that is what ascende said now....

i am so sorry but i can not tell you such a mild tale like perma ... my one involves just walking around in the nature the wetlands and forests botanical gardens and parcs of paris looking for plant parts what just most recently have been separated from their plants.... and one of the perhaps 10 samples made it to fusion with my donated cells

perma coming out onto the balcony and joyning ascende looking in the camera she said, here we probably have not too much of a reflective method, like ... we did watch the cells fusioning into each other but did not make notes...

when ascende was reading on his smartphone screen incoming messages like.... never mind, just tell us at what date and time you have taken samples of what petri dishes and we eventually see on the microscopic camera recordings what happened there between human and animal or human and plant cells

ascende now being relieved.... i am so happy about that approach, thank you for taking up the more logical side of research.... that is where i actually would like to announce perma and me taking some field trip time into the wild

perma supportingly... like we will stay around three months and for this time there is a free space here for some adventuring cell biology researchers....

when the texts coming in were allready having three people wanting to be there...
